Mike Barr, with Saws-Resource Protection & Compliance Division reviewed the application for the multifamily development. Of the 12 acres only 2.55 acres is within the recharge zone and the remaining 9.77 is within the contributing zone. No portion of the site lies within the 100-year flood plain and no sensitive geologic features were observed on the site or noted on file. SAWS recommends approval with all the environmental recommendations within the report to include 50% impervious cover for the 2.55 acres on the recharge zone.
