Part 2. Reason(s) for Update (check all that apply)

- ☐ Modify procedures and standards to workability and administrative efficiency
☐ Eliminate unnecessary development costs
☐ Update the procedures and standards to reflect changes in law or the state of the art technologies
☐

Part 3. Summary of Proposed Update with Suggested Text (see application instructions)

I am concerned with the brightness allowed in the current sign code related to on and off-premise signs. At night, the brightness of some of the digital signs is such that it is distracting to drivers and is creating an unsafe situation. The brightness allowed by the current code should be reviewed and amended. I am also concerned about the increased use of these digital signs all across the community, especially in areas around Camp Bullis which has very strict lighting requirements. If these digital signs are not properly adjusted, it could impact the missions at Camp Bullis, which would in turn harm our local economy. I believe the brightness of both on and off premise digital billboards should be adjusted.
