## **XXVII. PROHIBITION ON CONTRACTS WITH COMPANIES BOYCOTTING ISRAEL**

- 27.1 Texas Government Code §2270.002 provides that a governmental entity may not enter into a contract with a company for goods or services, unless the contract contains a written verification from the company that it:
- (1) does not boycott Israel; and
  - (2) will not boycott Israel during the term of the contract.
- 27.2 "Boycott Israel" means refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations specifically with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes.
- 27.3 "Company" means a for-profit sole proprietorship, organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or business associations that exists to make a profit.
- 27.4 By submitting an offer to or executing contract documents with the City of San Antonio, Company hereby verifies that it does not boycott Israel, and will not boycott Israel during the term of the contract. City's hereby relies on Company's verification. If found to be false, City may terminate the contract for material breach.

## **XXVIII. PROHIBITION ON CONTRACTS WITH COMPANIES ENGAGED IN BUSINESS WITH IRAN, SUDAN, OR FOREIGN TERRORIST ORGANIZATION**

Texas Government Code §2252.152 provides that a governmental entity may not enter into a governmental contract with a company that is identified on a list prepared and maintained under Texas Government Code §§2270.0201 or 2252.153. Consultant hereby certifies that it is not identified on such a list and that it will notify City should it be placed on such a list while under contract with City. City hereby relies on Consultant's certification. If found to be false, or if Consultant is identified on such list during the course of its contract with City, City may terminate this Agreement for material breach.

## **XXIX. PROHIBITION ON CONTRACTS WITH COMPANIES BOYCOTTING CERTAIN ENERGY COMPANIES**

Texas Government Code §2274 provides that a governmental entity may not enter into a contract with a company for goods or services, unless the contract contains a written verification from the company that it: (1) does not boycott energy companies; and (2) will not boycott energy companies during the term of the contract.

"Boycott energy company" means, without an ordinary business purpose, refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations with a company because the company: (A) engages in the exploration, production, utilization, transportation, sale, or manufacturing of fossil fuel-based energy and does not commit or pledge to meet environmental standards beyond applicable federal and state law; or (B) does business with a company described in (A).

By submitting an offer to or executing contract documents with the City of San Antonio, Company hereby verifies that it does not boycott energy companies and will not boycott energy companies during the term of the contract. City hereby relies on Company's verification. If found to be false, City may terminate the contract for material breach.

## **XXX. PROHIBITION ON CONTRACTS WITH COMPANIES THAT DISCRIMINATE AGAINST FIREARM AND AMMUNITION INDUSTRIES**

Texas Government Code §2274 provides that a governmental entity may not enter into a contract with a company for goods or services, unless the contract contains a written verification from the company that it: (1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and (2) will not discriminate during the term of the contract against a firearm entity or firearm trade association.

"Discriminate against a firearm entity or firearm trade association": (A) means, with respect to the entity or association, to: (i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association; (ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or (iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association.

By submitting an offer to or executing contract documents with the City of San Antonio, Company hereby verifies that it does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and will not discriminate during the term of the contract against a firearm entity or firearm trade association. City hereby relies on Company's verification. If found to be false, City may terminate the contract for material breach.

## **XXXI. PROHIBITED CONTRIBUTIONS**

- 31.1 Consultant acknowledges that City Code Section 2-309 provides that any person acting as a legal signatory for a proposed contractual relationship that applies for a "high-profile"

discretionary contract, as defined by the City of San Antonio Contracting Policy and Process Manual, may not make a campaign contribution to any councilmember or candidate at any time from the time the person submits the response to the Request for Proposal (RFP) or Request for Qualifications (RFQ) until 30 calendar days following the contract award. Consultant understands that if the legal signatory entering the contract has made such a contribution, the city may not award the contract to that contributor or to that contributor's business entity. Any legal signatory for a proposed high-profile contract must be identified within the response to the RFP or RFQ, if the identity of the signatory will be different from the individual submitting the response.

- 31.2 Consultant acknowledges that the City has identified this Agreement as high profile.
- 31.3 Consultant warrants and certifies, and this Agreement is made in reliance thereon, that the individual signing this Agreement has not made any contributions in violation of City Code section 2-309, and will not do so for 30 calendar days following the award of this Agreement. Should the signor of this Agreement violate this provision, the City Council may, in its discretion, declare this Agreement void.

# **Scope of Services**

## **1 SCOPE OF SERVICES**

### **1.1 TASK 1: PROJECT MANAGEMENT**

The objective of this task is to ensure the scope of work, data collection protocol, quality control/quality assurance, project schedule, traffic control plan, jurisdictional contacts, reporting requirements, and other project-specific requirements are adhered to throughout the project. In addition to the kick-off meeting and regular e-mail and telephone communications, up to nine (9) additional meetings will occur throughout the project at completion of major tasks and to review the results of this study at key milestones. Applied Research Associates, Inc. ("Consultant" or "ARA") anticipates an average of one on-site meeting per month.

### **1.2 TASK 2: INVENTORY REVIEW AND ROUTING**

#### *1.2.1 Inventory Review*

An important step of this project that will take place prior to the data collection is an evaluation of the City's current roadway and pavement management inventory datasets to efficiently plan data collection. The City will need to provide the following information to facilitate the analyses to be performed by ARA:

- Pavement management database
- Shape files / geodatabase of road centerlines
- Other supporting shape files such as council districts, city limits, etc.

This task is continuous throughout the project, incorporating inventory discrepancies that may be found in later stages of the project based on actual field conditions. This full vetting of the City's inventory will start before data collection begins and continue until all final analyses and reporting are complete.

#### **Inventory Review Process**

#### *1.2.2 Routing*

Once inventory records have been reconciled, ARA will then "route" our collection plan. ARA's route-optimization programs minimize data collection times in the field and facilitate data processing once data has been submitted to the office. Based on our preliminary review of the City's roadway inventory, we estimate an upper estimate of approximately 5,225 test miles representing 4,267 centerline miles of roadway. This estimate is based on one collection pass on each local roadway and two collection passes on principal arterial, minor arterial, and collector roadways. The actual test miles may be slightly less due to divided roadways, where only one collection pass per road segment will be necessary.

#### **San Antonio Street Network Breakdown**

Functional Class	CLM	Test Passes	Test Miles
Local	3,308	1	3,308
Collector	309	2	619
Minor	443	2	887
Principal	206	2	411
Total	4,267	--	5,225

Within the City limits, there are also approximately 182 miles of "Private" roadways that the City may consider including for PCI evaluation only. Pricing for adding these optional roadways is provided in the pricing section of this proposal.

### 1.3 TASK 3: DATA COLLECTION

ARA proposes to provide automated data collection using the ARA Digital Survey Vehicle (DSV) equipped with a 3D Laser Crack Measurement System (LCMS), profile bar, and ladybug 360 camera. During data collection, this vehicle is driven at posted speed limits (up to 60 mph.) ARA does not anticipate any traffic control requirements. Consultant's DSV is equipped with appropriate flashing lights and sign markings for additional safety. Additionally, all vans used for collection are marked with the company name.

#### 1.3.1 Sample Data Collection

To ensure that the methods, processes, and procedures are providing the intended deliverables at the expected level of quality, ARA proposes to perform a sample survey on a portion of the City's network. This sample survey will include approximately 25 miles of roads (½ to 1 day of collection) with the main objective of refining processes and ensuring that the City's expectations are met. ARA would prefer to collect data during the processing of the Sample Data Collection. Prior to performing the Sample Data Collection, all equipment will be calibrated, and pre-collection control sites will be set-up and tested to ensure that all sensors are operating properly and accurately.

#### 1.3.2 Full Network Data Collection

Full network data collection will consist of collecting pavement condition inspections on all 4,267 centerline miles of City streets. The data collection will consist of an automated data collection survey. Details of the data collection system are provided in a separate section. ARA will collect data on all local streets in one lane only and in two directions on arterial and collector streets. Consultant estimates a total of approximately 5,225 test miles based on the multi-pass requirements.

### 1.4 TASK 4: DISTRESS RATING & DATA PROCESSING

#### 1.4.1 Data Processing & Distress Rating

The following steps are taken as part of this task:

- 1) Database Setup – rating database is setup and configured (once per project)

- 2) Data Import – raw data files loaded into rating database
- 3) Matching – raw data files match to GIS inventory
- 4) Autorate – distresses are automatically rated by the analysis software
- 5) Quality Control (QC) and Markup – raters review 100% of the “Autorated” results, add patching & pothole distresses, adjust false positive/false negative cracking distresses, and manually rate any roads that are Portland Cement Concrete (PCC).
- 6) Reporting – Distress summary results, IRI results, Rutting results exported and are now ready to prepare Cartegraph OMS upload files.

If City wants ARA to match previous sampled areas for calculating the PCI as opposed to using the full-lane data collected, City will provide GIS files showing the sample locations.

The “Autorate” and “QC and Markup” tasks will be performed on 100% of the files. Consultant will perform the full lane rating, and review and perform quality control on each individual file.

Any files that are corrupt will be flagged for recollection and communicated to the data collection team for reacquisition. Consultant will do all clean up at the end of the project as to keep the field crews working in the same area to maintain productivity.

Data acquired with the Laser Imaging system allows the automated detection/identification of various types of distresses including all types of cracking, rutting, raveling, potholes, edge drop-off, sealed cracks, lane markings, and macrotexture. However, it should be noted that for PCI calculation purposes, the ASTM D 6433 standard includes 20 distress types for both asphalt and concrete surface types. Due to the complexity of separating all distresses into the 20 distress types, ARA will follow a two-step approach for distress rating, where a combination of fully automated computer-based crack type determination and a semi-automated rating process performed by an experienced pavement inspector. ARA will determine the most suitable approach to ensure quality results for the City.

Quality control (QC) and quality assurance (QA) are an integral part of ARA’s methodology. ARA incorporates QA/QC measures in all aspects of data collection, verification, analyses and reporting. During data collection, all data streams are verified on a daily basis as part of a comprehensive QA/QC program to ensure that all required data elements are being collected. It also serves to ensure that no segment is left untested, unless for a reason beyond AA control at the time of data collection (ex. road closures or construction activity).

All acquired data will be analyzed through distress rating software ICC Connect. Distresses will be categorized by type, severity, and quantity the results including location and extent.

International Roughness Index (IRI) values will also be reported for each roadway segment. IRI quantifies the ride quality (rough or smooth) that the traveling public experiences on the roadway. A 0 to 100 ride condition index will be calculated for each road segment based on the IRI values. The rutting measurements on each roadway are measured by the 3D-LCMS camera and will be reported individually as well as included as part of the Pavement Condition Index calculation. IRI will be converted to a Ride Index for upload to Cartegraph.

## **1.5 TASK 5: CARTEGRAPH UPLOAD**

ARA will coordinate with Cartegraph for this task. This task will require the assistance of Cartegraph to ensure the integrity of the Cartegraph database.

ARA will subcontract with Cartegraph subject to City approval.

ARA will take the summarized distresses, IRI, and asset inventory (see Task 9 for details on asset inventory) data from the processing and extraction tasks and format the results for provision to Cartegraph to perform the upload. We will streamline this process during the "Sample Study" to ensure all future uploads in the "Full Network" collection and upload run smoothly and are error-free.

## **1.6 TASK 6: PAVEMENT CONDITION INDEX CALCULATION**

A Pavement Condition Index (PCI) score in accordance with the ASTM D6433 Standard for each City-maintained roadway block-to-block segment will be calculated. ARA will utilize the Cartegraph OMS software to calculate the PCI scores, which are often classified into various condition categories (customizable)

## **1.7 TASK 7: VIEWING TOOL AND GIS DELIVERABLES**

### *1.7.1 Viewing Tool*

ARA has developed a Google Earth based viewing tool that can be provided to the City. The Google Earth based solution is extremely intuitive to use and requires minimal training and resources on the City's end to use. There is no license fee and no special software installation is required (other than GoogleEarth) to utilize this tool. ARA coordinate with the City to define which elements to include and the graphical layout of the tool to be provided. ARA coordinate with the City to determine if this is a viable viewing solution for the City. Consultant has other options that can be provided to the City as a viewing solution such as ArcGIS online or other custom ARA software. The ARA team will work out the specifications and requirements of this viewing tool while the data collection tasks are being performed as to have the tool ready to receive the processed images and pavement condition data once processing is complete.

### *1.7.2 ESRI Database Delivery*

As required by the City, ARA will deliver an ESRI personal geodatabase containing relevant pavement condition inspection data, segment identifiers (Cartegraph IDs), OCI data, and other pertinent information. The geodatabase will be referenced to the latest State of Texas (South Central) Plane Coordinate System (ex. NAD 1983 State Plane Texas S Central FIPS 4204), North American Datum (NAD 1983) and the North American Vertical Datum 1988 (NAVD 88). ARA anticipates providing the following feature classes in the geodatabase:

- Street centerlines including all pertinent pavement inventory attributes
- Pavement Condition Index (PCI) and Overall Condition Index (OCI) scores
- International Roughness Index (IRI) scores

- Rut index score
- Detailed pavement distress locations, types, severities, and quantities
- Pavement marking locations (for mileage added)
- Traffic sign locations (for mileage added)
- Guardrail/handrail locations (for mileage added)

ARA will provide GIS specialists and programmer support to customize the geodatabase as requested by the City.

## **1.8 TASK 8: ASSET INVENTORY**

New assets are to be inventoried as a part of this task. At least 102 centerline miles of roadway are to be included as part of this task. For estimating purposes, we have assumed that 70% of these roadways are local roadways only needing one collection pass and 30% are arterial/collector roadways, requiring two collection passes. This task will be performed using a LiDAR system. It should be noted that the LiDAR can be used for additional survey-grade surveying requests that the City may need.

Assets to be collect include:

- Pavement width of each new street segment (if not in City's inventory already)
- Pavement marking inventory for every segment (block to block) for mileage added to the street network inventory from previous pavement assessment
  - Marking length and width of each type
  - Lane configurations (i.e., lane striping)
  - Reflectors installed down the centerline of roads
- Sign for mileage added to the street network inventory from previous pavement assessment
  - Type of sign
  - Type of support
- Provide geospatially referenced JPEGs of the City's network, complete with header information (video data collection), which are directly linked or hyperlinked to the Asset Management Software, and which can be reviewed directly within the Asset Management Software
- Guardrail/Handrails within every segment (block to block)

## **1.9 TASK 9: PAVEMENT MANAGEMENT SYSTEM OPTIMIZATION**

This task will consist of the configuration, set-up, analysis with, and optimization of the City's Cartegraph OMS pavement management system.

The ultimate deliverable from this task will be a comprehensive report that will include the following elements from subtasks performed during the optimization:

- **Phase 1** (due 6 months from notice to proceed; less depended on new PCI results)
  - Updated Performance Curves
    - Review of geotechnical/geology in San Antonio
    - Develop soil groups for performance curves
    - Mine Cartegraph database for historic PCI data and identify trends and anomalies for development of performance families
    - Set-up performance curves based on functional class, soil groups, and trends from historic PCI scores
    - Review past maintenance/repair history to determine if new pavement types with corresponding performance curves need to be created.
    - Considerations on whether the age (initial) construction warrants making separate performance families.
  - Updated Decision Trees
    - Review current decision trees
    - Evaluate how other indices can be included (e.g., ride index)
    - Evaluate how other right-of-way asset information can be incorporated
    - Review validity of treatments based on geographic location/soil maps
    - Adjust based on performance of treatments
    - Adjust based on new performance families, if necessary
    - Review roadways requiring frequent repairs and determine if this is a decision tree issue.

  - Recommend project limits and/or application refinements to FY 2024 - FY 2027
  - Develop project list for FY 2028, FY 2029, and FY 2030.

The Phase 2 report will be considered the final PMS Optimization report. The Executive Summary will incorporate elements from this report, but not the same level of detail.

The City will either provide or have already performed the following:

- 1) Update Work History – completed maintenance has already been entered into Cartegraph
- 2) Update Unit Costs – City will provide current unit costs for maintenance
- 3) New inventory added – all inventory will be added by City personnel only and there will be a one-to-one match to the City's Esri GIS database

The Parties expect that this will be a cooperative effort with regular communication to ensure the end product meets or exceeds the expectations of the City.

## **1.10 TASK 10: EXECUTIVE SUMMARY**

This task involves preparing an Executive Summary Report that will document all fieldwork, ride statistics, distress information, and the maintenance and rehabilitation recommendations. This Executive Summary will include a summary of fieldwork, summary of network condition, detailed outline of the work plans developed, recommended practical management plan project groupings and with recommendation repair activities with estimated costs, and GIS exhibits. This will include tables, graphics, and a descriptive narrative for City personnel to utilize. ARA anticipates that the Executive Summary will address the following at a minimum:

## **3 PROJECT SCHEDULE**

Completion of the project will take approximately 10 months from notice to proceed for substantial completion of work. - April 2023 – Council Goal Setting Meeting
- June 2023 – Trial Budget
- July 2023 – Department Meetings with City Manager
- August 2023 – Budget Presentation
- September 2023 – Budget Approval

Consultant's goal is to have an early warning system for the Public Works Department based on how the results of this survey are trending. This will help facilitate early communication and prevent "surprises" for City personnel regarding pavement conditions, budgets, and recommendations.
